New challenges, a new Buyers' Guide

The first Prime Minister Trudeau once said, apropos of Canada's relationship to the United States, that it's like sleeping with an elephant.

But what happens when the elephant suddenly develops the speed and maneuverability of a cheetah?

Businesswise, a transformation similar to that occurred at the end of 2017, when the U.S. passed a massive tax reform bill that, among other things, slashes the corporate income tax rate from 35 per cent to 21 per cent. The old rate of 35 per cent caused many U.S. corporations and manufacturers to rearrange their affairs to avoid investing, which reduced productivity. The new rate, however, should free up money for American companies to invest in buildings, equipment, and people. And it already seems to be paying off: The American economy expanded at an annualized pace of almost four per cent in the fourth quarter of 2017, after having struggled to grow at much more than two per cent a year for the eight years of the Obama administration.

It's safe to say, then, that Canada's biggest manufacturing and business investment rival just got a whole lot more competitive. Add to that the fact that the U.S. is very likely heading into an era of economic protectionism, and it could spell trouble for some Canadian product exporters, plastics processors among them.

With America's business sector morphing into a faster, meaner animal during the Trump era, you might want to think of the 2018 *Canadian Plastics* Buyers' Guide as the print and digital equivalent of a survival guide. As our largest trading partner turns inward, reliable information about Canada's plastics market will be at a premium for Canadian processors, machinery and resin suppliers, and moldmakers. The Guide can help you figure out who to call and who not to call — which business cards to keep and which to tear up with extreme prejudice; which coordinates to update in your BlackBerry or iPad or iPhone.

We've also dropped the "Processing Companies" section from this year's Buyers' Guide, as a small concession to the fact that a lot of you are already relying on the online version of the Guide from start to finish. But don't worry; all of the info relating to Canada's many plastics processors — names, addresses, processes, contact info, et cetera — is available in the Buyers' Guide section of our website, www.canplastics.com.

Getting back to the printed Buyers' Guide, if — for whatever reason — you notice that your company's listing is out of date, or missing altogether, let us know and we'll make sure that we update your listing in our online database ASAP, and also include you in next year's edition.

In the end, we're confident that the information in this directory reflects as accurately as possible the changes in the plastics marketplace over the past 12 months.

We're also confident that, in the age of a more competitive corporate America, you'll want to keep this volume handy. If we can make it easier for you to plan for the future — to really leverage your status as a player in what's shaping up to be a new economic world — then I think we've done our job.

Discover **THE PERFECT CHILLER.**

ENERGY SAVINGS UP TO 42%

It's easy to spot the best chiller - just look for the Thermal Care name. Thermal Care is the leading manufacturer of process cooling equipment, with reliable and innovative products like the TSE Series central chiller. Built on a modular frame for easy expandability. Also, our TSE Series central chillers have floating head pressure which modulates refrigerant head pressure at low load conditions to save energy. You get the customized cooling capacity you need, with a smaller footprint and a better price.

Unsure of which configuration is best for you? Let our experienced sales engineers help you discover the perfect solution. *Learn more at thermalcare.com/TSE or call toll-free 888-383-8108.*
